

97% of organizations believe project management is critical to business performance and organizational success.*

Project management and governance is fundamental to enable organizations to manage their resources toward business prosperity. The proper execution of governance allows ECS Team to provide our clients greater visibility and control of program activities. Our governance approach begins with the ECS Team's Solution Framework delivery model, providing a prescriptive but flexible set of best practices, techniques, samples and tools for our consultants to leverage for any deliverable on any engagement.

ECS Team's project managers are adept at all aspects of governance and project delivery. Our seasoned project management and governance professionals are certified Project Management Institute Project Management Professionals (PMP) and Scrum Alliance Scrum Masters (CSM), having expertise in various software development life cycle (SDLC) methodologies including Agile, iterative and more traditional waterfall approaches. These governance practitioners leverage the ECS Team Solution Framework best practices and are also engaged in the ongoing contribution to the enhancement of these best practices as the project management and governance discipline evolves.

Project Management & Governance Competencies

Project Management & Evaluation

Governance Design & Execution

Creating Project and Release Roadmaps

Creating Project Schedules, Resource Plans

Developing Communication Plans

Developing Risk Management Plans

Monitoring Project Execution

How ECS Team Can Help

Our project managers are adept at planning, monitoring and leading all aspects of project delivery using Agile, iterative and traditional waterfall approaches, depending on the client's preferred methodology. Our project management and governance services include:

- **Project management and evaluation** including developing, assessing and selecting a proper life cycle strategy and governance tools for the project, while considering performance, cost, time and scope constraints
- **Governance design and execution** using ECS Team's Solution Framework tailored to the enterprise's objectives and SDLC
- **Creating project and release roadmaps, schedules, resource plans and financial management** appropriate for the SDLC methodology to be used
- **Developing communications and risk management plans** including risk identification, mitigation and monitoring
- **Monitoring project execution** appropriate for the SDLC methodology used that provides regular project health and performance to stakeholders

About ECS Team

ECS Team is a technology consulting firm that helps our clients accelerate digital transformation, improve productivity and streamline business operations. We have completed hundreds of successful projects ranging from custom development and cloud application migration to workplace collaboration solutions and complex system integrations. Our senior-level, technical consultants are experts in delivering technology-driven solutions for enterprises nationwide.
